natUIve framework

Element	Code	Options

Grid	`<div class="row">`
	
	   `<div> … </div>`
	   `…`
	
	`</div>`
		• Columns: just a `div`, `.column3`, `.column23`, `.column34` etc.
		• `.contain` constrains to standard page width
		• Columns have equal width automatically. If a column gets explicit width, the others divide the rest equally among themselves.

Mobile/Desktop Content	`<div class="narrow-screen">`
	   `…`
	`</div>`
	
	`<div class="wide-screen">`
	   `…`
	`</div>`	

Slider	`<div class="slider">`
	
	   `<div> … </div>`
	   `…`
	
	`</div>`
		• `.thumbnail` inside slides makes thumbnail navigation instead of numbered one.
		• Create sliders dynamically with `makeSlider(el)`

Main Area	`<div id="content">`
	
	   `<div class="banner">`
	
	      `<div class="contain">`
	        `…`
	      `</div>`
	
	   `</div>`
	
	   `…`
	
	`</div>`
		Because list styles etc are different than the head.
